I attended the “White House Climate Summit and Leadership Council Meeting” on September 14, 2021.

This meeting was attended by Elected Officials from around the country joining with representatives of the White House Office of Intergovernmental Affairs, and Council of Environmental Quality Tackling the Climate Crisis.

President Biden addressed the climate crisis as one of the exotestal threats facing our country. The White House is exploring ideas that would allow America to become a leader in Green Jobs by introducing educational programing in community colleges and technical training on how to fix solar panels and wind turbines as one of many job opportunities.

This meeting was interestingly on the heels of a presentation just weeks before at out September Borough meeting by representatives from Cutting Edge Techno Solutions (CETS). As I reported last month, they were interested in leasing space in our Elementary School to create a training center that would prepare individuals with skills to perform green energy jobs.

There were some other ideas that came out of the Summit that small towns like ours could do to be a part of this national effort. One idea was to create a Civilian Climate Corp that would put people to work in their own communities. The FDR example would be to create Victory Gardens in the community.
